

Acupuncturist in Prince George

Acupuncturist in Prince George - Intravenous therapy or likewise called IV therapy is the giving of substances directly into a vein. Intravenous therapy can be used to deliver medications, for blood transfusions and to correct electrolyte imbalances. It can also be used as fluid replacement in order to correct, like for example, dehydration. The intravenous route is the fastest way in order to deliver medications and fluids all through the body. Various medications, along with lethal injections and blood transfusions, can only be given intravenously.

Intravenous Vitamin C therapy is an alternative remedy used for various medical illnesses like for example cancer. Although there is still controversy surrounding this particular form of treatment, lots of centers dedicate specific treatment regimens. Amongst the reputed effects of Vitamin C therapy comprise: prolonging survival and increasing the quality of life. Vitamin C is effective in preventing systemic free radical injury and corrects a lack of ascorbic acid, which is usually found in individuals who have cancer. Vitamin C inhibits hyaluronidase. This is actually an enzyme made by cancer cells that is responsible for the breakdown of healthy tissue, resulting in metastasis and tumor progression. Vitamin C likewise works synergistically conventional with different conventional cancer treatments.

Vitamin C, also known as L-ascorbate or L-ascorbic acid is a very vital nutrient for humans and a lot of other animals. It acts as an antioxidant and protects the body against oxidative stress. Vitamin C is likewise a co-factor in at least 8 enzymatic reactions consisting of different collagen synthesis reactions which cause the most severe indications of scurvy when they are not working correctly. In animals, these enzyme reactions are really essential in preventing bleeding from wound-healing and capillaries.

Vitamin C Mega Dosage

There are numerous organizations and individuals who advocate large doses of Vitamin C, over ten to one hundred times more than the Recommended Daily Intake or RDI. They take these amounts either orally or intravenous therapy. There have yet to be large, randomized clinical trials on the effects of high doses done on the general people. Linus Pauling spent a large portion of his life advocating the use of mega doses of vitamin C. He thought the established RDA was sufficient so as to prevent scurvy but not necessarily a high enough dosage for optimal health.

Mega doses of vitamin C have been utilized in the prevention and treatment of various illnesses comprising cancer, coronary disease and the common cold. Current RDI for vitamin C is 60 mg although, several references quote a minimum of 30 mg and others state we must have at least 100 mg on a daily basis. People taking a mega dose can ingest anywhere from 500mg to 1000 mg on a daily basis but the side effect of diarrhoea may be a common issue for people who ingest large amounts.
