

Hyperbaric Oxygen Therapy Prince George

Hyperbaric Oxygen Therapy Prince George - Therapy referred to as oxidative therapy is done by introducing extra energy inside the body. The three ways which this can be performed is to introduce oxygen within the body under pressure using Hyperbaric Oxygen, by mixing blood with ozone gas, or through infusing Hydrogen Peroxide or H₂O₂ into a vein. It just takes a small amount of Hydrogen Peroxide in order to produce a large amount of oxygen, hence, parts on the body that suffer from poor circulation can benefit greatly from the supply of oxygen.

Oxidative therapy has been made use of ever since the 1920's, when Dr. T.H. Oliver initially used Intravenous Hydrogen Peroxide during an outbreak of influenza. This successful treatment helped many individuals and the outcome were reported in the Lancet, a British medical journal. Some years later, Dr. Charles Farr published a paper entitled "Therapeutic Use of Intravenous Hydrogen Peroxide." This particular paper has become the protocol for doctors who administer H₂O₂.

The theories around this particular therapy vary in its explanation of the way this treatment works. Some researchers and scientists have discovered that the presence of H₂O₂ in the body is more complex than originally thought. The benefits of Oxidative Therapy have been show effective for the following health sicknesses: Cerebrovascular Disease, Cardiovascular Disease, Coronary spasm, Cardiac arrhythmia, Asthma, Peripheral Vascular Disease, COPD, Pulmonary Diseases, Raynaud's Phenomenon, Influenza, Chronic Bronchitis, Bronchiectasis, HIV, Herpes Simplex, Immune Diseases, Lupus, Multiple Sclerosis, Alzheimer's, Chronic Fatigue, Fibromyalgia, Environmental Poisonings, Rheumatoid Arthritis, Parkinson's Disease, Migraines, among others.

The energy producing chemical reaction of oxidation is important within the body as the body utilizes various forms of oxygen. In order to prevent damage to surrounding normal tissue, treatments must be controlled carefully. Anti-oxidants which come in the form of enzymes and vitamins would help to protect the body from whichever damage due to oxidation. Then again, the immune system uses oxidative energy as a weapon in order to directly kill infectious agents like for example yeast, bacteria, viruses and parasites.
